<i>bottiglie prodotte:</i>	452

The stream originates from the union of three branches that descend from the Apennine watershed of the Acquerino Forest, in particular from Poggio of Acquifredola and from Montanile: the Bure di Baggio branch; that of the Bure Villa of Baggio that of the Bure di Iano. Before uniting in a single course, they affect deeply the profiles of the hills of the villages of the same name, giving this portion pre-mountain of Valdibure the shape of a heart.
